

Agent Architecture Flow

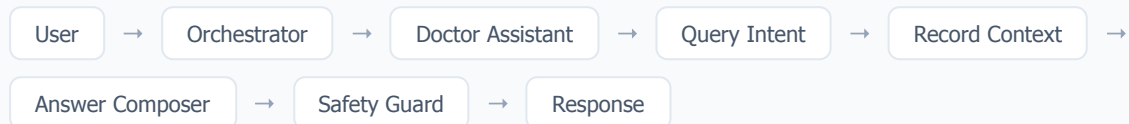

Current runtime overview for the Express-backed document pipeline

Default production flow: **DocumentTypeRouter** classifies and dispatches to specialized extractor agents. **ReActExtractionAgent** exists in the repository but is optional, not the default extraction path. Processing Insights are served separately from `analytics.sqlite` through `/api/analytics/overview`.

Example: "Why is BP low?"

Orchestrator (1) Agents (8) • Sub-Agents (7) Skills (20) Tools (33) LLM
